

# Roskilde declaration

REPLANT THE PLANET

The members of the Learning about Forests (LEAF) programme commit to encourage the children of the world to deal with the issues of climate change by adopting the principle and practice of sustainable development.

LEAF will give children the possibility to act for a better climate and future by teaching them to:

- ***Plant trees***
- ***Take care of trees and grow forests sustainably***
- ***Use wood as a sustainable and renewable material***

We all have a responsibility for the future well being of the planet. Small actions by many can lead to great change. As the leaders of the world gather at the COP 15 with the task of agreeing to limit the impact of our lifestyle on the climate, the LEAF programme encourages schools, children and their families to replant the planet for a greener future.

The ***Roskilde declaration*** was signed by the Learning about Forest coordinators from 14 countries gathered in Roskilde 9.-11. December 2009
